

VI variability of common wheat. adaptation to different soils

1-6 150 vars.

12 chance origin of some vars ~~X~~

15 careful selection of separate ears of corn in Chusilla tin

16 + Virgil ~~X~~

52 Disbelievers receipt of change of seed but then he studying various manners

55 1/10 of seed perished even with greatest care

59 on one variety soon predominating over  
(800) another in wheat, & hence called degenerating  
(He has shown how very little trouble is  
heredity) without destruction

65 on micropilla tending to sport in some vars.

66. Salween does not crop because flowers earlier (2)

70. Wheat seem affected of climate whence derived

(Evidently believes in copying)

73 Height of stalks & other

proportion of glumes

64 show a better plants  
79 quality of straw

401

Substituted p. 1 to 79
